Courses

JavaScript Course (Udemy)

In this course I have learned about JavaScript technology and how JavaScript is used for manupulating and implementing logic to websites.

React Js Course (Udemy)

I am pursuing the React Js course to build dymanic UI's and enhance my web development skills

Education

2020 - 2023

Sandip Institute Of Technology And Research Center, Nashik
9.01 CGPA
BE Electrical Engineering

2018-2020

Sandip Polytechnic, Nashik
91.72 %
Diploma Electrical Engineering

Skills

- React Js
- Redux Js
- JavaScript
- Tailwind CSS
- CSS
- HTML

Projects

Expense Tracker

In this project, I built an intuitive expense tracker using React JS, complete with features such as expense addition, monthly expense lists, and dynamic bar chart views of total expenditures. Throughout the development process, I leveraged advanced React concepts such as states and useEffect hooks, further solidifying my understanding of these fundamental concepts.

Banking-app

For this project, I created a basic banking application using JavaScript, HTML, and CSS. By leveraging advanced concepts such as arrays and objects, I successfully implemented core functionalities such as transaction tracking, loan management, and user-to-user money transfers.

Pomodoro-timer

In this project, I designed and implemented a simple pomodoro timer using JavaScript, HTML, and CSS. The timer includes two options for work sessions - a traditional 25-minute interval or a longer 50-minute session for extended productivity.

Drum-kit

In this project, I developed a simple yet fun drum kit application that responds to user input with unique drum sounds. Using a combination of JavaScript, HTML, and CSS, I created a dynamic interface that maps each drum sound to a specific key on the keyboard, allowing for seamless and intuitive playability.
